

Global Diversified Return Fund

A Sub fund of the Insight Global Funds II Plc

Insight
INVESTMENT

FACTSHEET -- 30 JUNE 2010

INVESTMENT OBJECTIVE

The objective of the Fund is to seek to deliver positive total returns on an annualised basis with the prospect of long-term capital growth commensurate with investment in a diversified portfolio of financial instruments and transferable securities as further described below.

INVESTMENT POLICY SUMMARY

The policy of the fund is to gain exposure to one or more of the following asset classes: fixed income, cash, near cash and deposits, equities, property, certain types of absolute return products and commodities. Exposure to these asset classes will be achieved through investment in collective investment schemes, transferable securities, money market instruments and, particularly in the case of property and commodities, derivatives. Derivatives may be used for meeting the investment objective of the Fund and/or for the purposes of efficient portfolio management.

PERFORMANCE (€) %

To 30 June 10	2005/2006	2006/2007	2007/2008	2008/2009	2009/2010
Fund	N/A	N/A	14.2	-12.2	5.9

To 30 June 10	Fund	B'mark	Sector	Quartile
3 months (%)	-2.2	0.2	-1.5	3
YTD (%)	-0.6	0.3	1.2	3
1 year (%)	10.1	0.7	9.4	2
Since inception (% p.a.)	10.1	2.7	3.5	2

PERFORMANCE SINCE LAUNCH

Past performance is not a guide to future performance. n/a: Performance data does not exist for relevant periods. Basis: Class (A-Retail, full charge basis) shares, mid to mid excluding initial charge, income reinvested net of UK tax. Source: Lipper, a REUTERS company. Fund Benchmark: 3 Month GBP EURIBID Index. Inception date: 2 Oct 2006. Quartile is the ranking of a particular portfolio or manager in a league table of returns (In one of four quarters).

FUND MANAGER'S COMMENTS

UK equity markets fell sharply for a second month as fears emerged of a double-dip recession. A wave of weaker-than-expected economic data and concerns over a slowdown in China added to investor fears. Returns in corporate bonds were positive however, as investors looked for a lower-risk way to position themselves for the forthcoming earnings season.

The Fund outperformed its cash benchmark over the month, preserving capital well amid sharply falling equity markets. Holdings in more cautious absolute return funds helped performance amid the market volatility. Strong performances from the Blackrock UK Special Situations and Templeton European funds were positive for performance, and our Asian funds also strongly outperformed global markets, with investors buying into the strong growth potential in the region.

In terms of activity we bought a new holding in the Neuberger Berman Distressed Debt fund. This invests in companies with strong asset bases but that are struggling with their debt obligations, with a view to restructuring and exiting these positions at a significant profit. We also increased our holding in the AXA US Short Duration High Yield Bond fund and added a new holding in the Deutsche Bank Macro Trading Index fund.

Past performance is not a guide to future performance. The value of investments and any income will fluctuate (this may partly be due to exchange rate changes) and investors may not get back the amount invested. Derivatives may be used for investment purposes.

Global Diversified Return Fund

KEY FEATURES

- Designed to deliver equity like returns in varying market conditions over a full market cycle
- Diversified portfolio with the flexibility to move between asset classes
- Multi asset, multi managed fund

INVESTMENT PHILOSOPHY AND PROCESS

The Fund's diverse, multi-asset approach allows for the creation of portfolios of largely non-correlated assets, which serves to mitigate downside risk. Active management of this broad range of asset classes can then further improve risk-adjusted returns. This tactical asset allocation is undertaken to benefit from the best global investment opportunities at any given time, while equal emphasis is placed on risk analysis.

The Multi-Asset Group identifies long-term strategic themes that are likely to result in outperformance of particular assets, be they regional equity or property markets, currencies or commodities. These ideas are generated from a variety of sources. The team place great emphasis on internal research and idea generation. This is supplemented by information that comes to light from discussions with external fund managers during their rigorous manager selection process. There is also continual contact with sell-side analysts, which often unearths potential investment opportunities or new themes.

The team undertakes a rigorous selection process to identify the optimum investment opportunities, beginning with initial screening through to fund manager interviews and further in-depth analysis.

Beyond this extensive universe of pooled funds, Insight's Multi-Asset Group seeks to make use of other investment opportunities by investing in tailor-made structured notes and other derivative instruments. These notes may be purchased in order to benefit from market inefficiencies or arbitrage opportunities, and can be a good low-risk method of supplementing a fund's returns. They are generally sourced from investment banks or other counterparties, with extensive research undertaken to find the best terms for each instrument.

RISK ASSOCIATED WITH THE FUND

- **Emerging Markets:** The fund invests in emerging markets which can be less liquid and riskier than more developed markets and difficulties in accounting, dealing, settlement and custody may arise.
- **Derivatives for investment purposes:** The fund may use derivatives for investment purposes. Whilst this is not intended to cause larger, more frequent changes in the fund price or increase its risk profile, derivatives are inherently volatile and the fund may be exposed to additional risks and costs as a result.
- **Property:** The fund may invest indirectly in property assets, which are inherently less liquid and more difficult to sell than other assets. The valuation of physical property is a matter of the valuer's judgement rather than fact.

FINANCIAL TERMS GLOSSARY

- **Sortino Ratio:** The Sortino ratio measures the risk-adjusted return of an investment asset, portfolio or strategy. It is a modification of the Sharpe ratio but penalizes only those returns falling below a user-specified target, or required rate of return, while the Sharpe ratio penalizes both upside and downside volatility equally.
- **Sharpe ratio:** Measure of the total risk-reward trade-off calculated as the excess return divided by the variability of the return.
- **Standard deviation:** A statistical measure of the variability of returns. Though often used to quantify risk, it assumes a normal (Gaussian) distribution of returns which may be unrepresentative of the behaviour of financial markets.
- **Max monthly loss:** Maximum monthly loss is the largest percentage loss recorded by the fund during a calendar month since inception.
- **Correlation:** A statistical measure of how two assets move in relation to each other. Correlations range from +1.0 to -1.0. A strong positive correlation indicates that one asset will move by a similar degree and in the same direction as another asset. A strong negative correlation indicates that one asset will move by a similar degree in an opposite direction to another asset.

Unless otherwise stated, the source of all information is Insight Investment Management (Global) Limited.
