SHARE CLASS PERFORMANCE (S £ Acc share class)

Source: Insight Investment and Rimes. Fund performance is shown for share class S £ Acc and is calculated as total return, including reinvested income, gross of fees and expenses. Gross of fees performance results do not reflect the deduction of charges, which will reduce investors' returns. Benchmark performance shown is for 3 Month Sterling Libor. Performance for periods over one year is annualised. Past performance is not indicative of future results. Investment in any strategy involves a risk of loss which may partly be due to exchange rate fluctuations.

FUND MANAGER COMMENTS

The Fund delivered a negative return in January, underperforming its cash benchmark. Country allocation was negative, driven by a partial reversal of December gains from our long US versus short Germany position. Exposure to US 30-year breakevens was positive: we have been taking profit on this position over recent months. Our short 2-year Treasury versus 30-year Treasury flattener position was negative as the US yield curve steepened. Duration positioning was also negative, with performance mostly driven by tactical trading. In credit, our cautious stance detracted marginally as we were short credit default swap indices that rallied from December wides. We partially removed some of these hedges to leave us with a small net long via short-dated high yield and bank loans. Emerging market debt was a modest positive as local rates benefited from a rally in yields. Currency positioning made no material contribution.
