Source: Insight Investment and Rimes. Fund performance is shown for share class S £ Acc and is calculated as total return, including reinvested income, gross of fees and expenses. Gross of fees performance results do not reflect the deduction of charges, which will reduce investors' returns. Benchmark performance shown is for 1-month SONIA (previously 3-month GBP LIBOR until 31st December 2020). Performance for periods over one year is annualised. Past performance is not indicative of future results. Investment in any strategy involves a risk of loss which may partly be due to exchange rate fluctuations.

FUND MANAGER COMMENTS

The Fund generated a negative return in March. Risk free markets were volatile due to the turmoil in the banking sector. Over the month, the Fund's credit positioning was negative. We closed our long cash position versus short credit default swaps. Loans and asset-backed securities detracted from performance. Duration positioning proved detrimental, primarily driven by our short position in 10-year UK gilts. The Fund's yield curve positioning was neutral, as the losses from the yield curve flattener position in Japan were offset by gains from the steeper positions in Europe and Australia. Our inflation positions were neutral. The Fund's swap spread position proved detrimental, as swap spreads widened in Europe. Our emerging market positions were positive. Country selection was negative, driven by our short positions in Canada and Australia relative to the US and New Zealand. Finally, our currency positioning detracted from performance due to a short position in the US dollar.
