Q1 2026

> **BNY** | INVESTMENTS

Important disclosures

Risk disclosures

- **Past performance is not indicative of future results. Investment in any strategy involves a risk of loss which may partly be due to exchange rate fluctuations.**
- The performance results shown, whether net or gross of investment management fees, reflect the reinvestment of dividends and/or income and other earnings. Any gross of fees performance does not include fees, taxes and charges and these can have a material detrimental effect on the performance of an investment. Taxes and costs incurred when purchasing, holding, converting or selling any investment, will impact returns. Costs may increase or decrease as a result of certain currency conversions, such as currency hedging, investment exposure to international markets, and exchange rate fluctuations.
- Any target performance aims are not a guarantee, may not be achieved and a capital loss may occur. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies over time, and/or prevailing market conditions and are not an exact indicator. They are speculative in nature and are only an estimate. What you will get will vary depending on how the market performs and how long you keep the investment/product. Strategies which have a higher performance aim generally take more risk to achieve this and so have a greater potential for the returns to be significantly different than expected.
- Any projections or forecasts contained herein are based upon certain assumptions considered reasonable. Projections are speculative in nature and some or all of the assumptions underlying the projections may not materialise or vary significantly from the actual results. Accordingly, the projections are only an estimate.
- Portfolio holdings are subject to change, for information only and are not investment recommendations.

Associated investment risks

Fixed income

- Investments in bonds are affected by interest rates and inflation trends which may affect the value of the portfolio.
- A credit default swap (CDS) provides a measure of protection against defaults of debt issuers but there is no assurance their use will be effective or will have the desired result.
- The issuer of a debt security may not pay income or repay capital to the bondholder when due. The return risk to a portfolio is higher where a portfolio is highly concentrated in such an issuer.
- Derivatives may be used to generate returns as well as to reduce costs and/or the overall risk of the portfolio. Using derivatives can involve a higher level of risk. A small movement in the price of an underlying investment may result in a disproportionately large movement in the price of the derivative investment.
- Investments in emerging markets can be less liquid and riskier than more developed markets and difficulties in accounting, dealing, settlement and custody may arise.
- Where high yield instruments are held, their low credit rating indicates a greater risk of default, which would affect the value of the portfolio.
- The investment manager may invest in instruments which can be difficult to sell when markets are stressed.
- Leveraged funds: as a result of market conditions, the value of the assets held by a Fund may fall and result in a higher degree of leverage than is deemed appropriate by the Investment Manager. In order to reduce the degree of leverage, the Investment Manager may seek to reduce a Funds' total asset exposure. Investors would need to subscribe for additional Shares in order to maintain the level of sensitivity to market movements. Where such an event is unanticipated, this may result in the investors having less sensitivity to market movements than they might consider appropriate to their individual requirements until they have subscribed for additional Shares
- While efforts will be made to eliminate potential inequalities between shareholders in a pooled fund through the performance fee calculation methodology, there may be occasions where a shareholder may pay a performance fee for which they have not received a commensurate benefit.

Associated investment risks

Responsible investment

- **Investment type:** The application and overall influence of responsible investment approaches may differ, potentially materially, across asset classes, geographies, sectors, specific investments or portfolios due to the nature of the specific securities and instruments available and the wide range of sustainability related and other relevant investment risks which may be considered.
- **Integration:** The integration of sustainability risks within investment analysis refers to the inclusion of sustainability-related risk factors alongside traditional financial risk factors in investment analysis and research to judge the fair value of a particular investment and may also include the monitoring and reporting of such risks within a portfolio. Integrating sustainability-related risk analysis in this way will not typically restrict the potential investable universe, but rather aims to ensure that relevant and material risks are taken into account by analysts and/or portfolio managers in their decision-making.
- **Ratings:** The use, influence and relevance of Insight's ESG ratings in specific investment strategies will vary, potentially significantly, depending on factors including the nature of the asset class and the structure of the investment mandate involved, including whether a strategy has a specific ESG or sustainability objective. The ratings are based on third-party data, which are provided and generated using proprietary methodologies of data providers. These providers may in turn depend on issuer data which could be inaccurate, incomplete or out of date. Insight's ratings therefore may require specialist interpretation. The methodologies we employ to aggregate data, generate ratings and apply these ratings in specific investment processes and strategies are subject to change.
- **Engagement activity:** The relevance of Insight firm-level stewardship engagement activity and the outcomes of this activity relating to buy, hold and sell decisions made within specific investment strategies will vary, potentially significantly, depending on the nature of the asset class and the structure of the investment mandate involved.
- **Reporting:** Information provided on sustainability-related measures or

characteristics of a portfolio is for illustrative or indicative purposes, and does not in itself signify sustainability-related objectives or activity of the portfolio.

- **Forward-looking commitments and related targets:** Where we are required to provide details of forward-looking targets in line with commitments to external organisations, these goals are aspirational and defined to the extent that we are able and in accordance with the third-party guidance provided. As such we do not guarantee that we will meet them in whole or in part or that the guidance will not evolve over time. Assumptions will vary, but include whether the investable universe evolves to make suitable investments available to us over time and the approval of our clients to allow us to align their assets with goals in the context of the implications for their investments and issues such as their fiduciary duty to beneficiaries.

Insight applies a wide range of customised sustainability, climate or responsible investment related guidelines to mandates which can be tailored to reflect individual client requirements. Individual investor experience will vary depending on the investment strategy, investment objectives and the specific guidelines applicable to a Fund or portfolio. Please refer to the investment management agreement or offering documents such as the prospectus, Key Investor Information Document (KIID) or the latest Report and Accounts which can be found at www.insightinvestment.com and where applicable information in the following link for mandates in scope of certain EU sustainability regulations <https://www.insightinvestment.com/regulatory-home/sustainability-regulations/>; alternatively, speak to your main point of contact in order to obtain details of specific ESG parameters applicable to your investment.

Associated investment risks

Global ABS Fund

- The issuer of a debt security may not pay income or repay capital to the bondholder when due.
- Investments in emerging markets can be less liquid and riskier than more developed markets and difficulties in accounting, dealing, settlement and custody may arise.
- Investments in bonds are affected by interest rates and inflation trends which may affect the value of the portfolio.
- Where high yield instruments are held, their low credit rating indicates a greater risk of default, which would affect the value of the portfolio.
- The investment manager may invest in instruments which can be difficult to sell when markets are stressed.
- The specific collateral used to secure a loan may decline in value or become illiquid, which would adversely affect the loan's value. Also, many loans are not actively traded, which may impair the ability of the portfolio to realise full value in the event of the need to liquidate such assets.

Volcker disclosures

Global ABS Fund

The above fund(s) described in this document meet the definition of a covered fund under the Volcker Rule regulations, that is, a domestic or foreign hedge fund, private equity fund, venture capital fund, commodity pool or alternative investment fund (AIF) that is sold in a private, restricted or unregistered offering to investors who must meet certain net worth, income or sophistication standards or is sold to a restricted number of investors. Generally, any such fund is not registered with a securities/commodity regulator and therefore cannot be offered to the general or retail public unless the investor meets applicable eligibility qualifications. **Any losses in the fund will be borne solely by investors in the fund and not by BNY (including its affiliates); therefore BNY's losses in the fund will be limited to losses attributable to the ownership interests in the fund held by BNY and any affiliate in its capacity as an investor in the fund or as beneficiary of a restricted profit interest held by BNY or any affiliate.**

- **Ownership interests in the fund are not insured by the Federal Deposit Insurance Corporation (FDIC), are not deposits, obligations of, or endorsed or guaranteed in any way, by BNY. Neither BNY nor any of its controlled affiliates (which includes the fund's general manager/managing partner/investment adviser), may directly or indirectly, guarantee, assume, or otherwise insure the obligations or performance of the fund or of any other covered fund in which the fund invests.**
- **Investors should read the fund's offering documents before investing in the fund. Information about the role of BNY, its controlled affiliates, and their employees in sponsoring or providing services to the fund are described in the Volcker Rule section of the offering documents.**

Global ABS Fund

Portfolio summary as at 31 March 2026

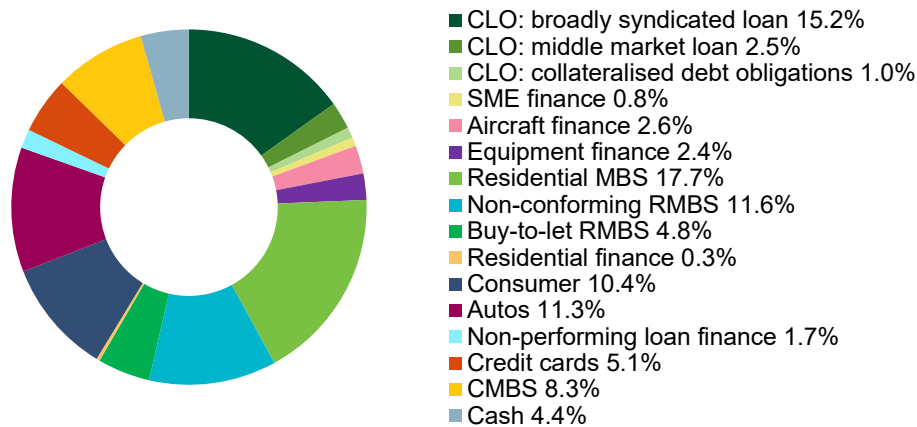

- **Investment objective:** the investment objective of the Fund is to seek to produce a return for Shareholders, generated from income and capital appreciation
- **Asset size:** £2,274m
- **Attractive carry:** yield of 5.42%, spread to SONIA of 169bp
- **High credit quality:** AA-
- **Short maturity:** weighted average life 2.8 years
- **Low interest rate risk:** investments are predominantly FRNs
- **Daily liquidity**
- **Low transactions costs:** currently 0.16% (enter or exit)

Please refer to the risk disclosures and associated investment risks at the front of this document. The Global ABS Fund (GLOABSUP) is shown gross of fees and in GBP. Benchmark: SONIA. Inception: 11 May 2018. Yield shown is gross redemption. All returns over one year are annualised. Fees and charges apply and can have a material effect on the performance of your investment.

Economic and market themes

Q1 2026

- The economic outlook is uncertain given the hostilities in the Middle East and assessing the damage to oil and gas exporting capability of the region. Before the war began, global economic growth indicators were accelerating and inflationary pressure were subsiding. The focus now switches to how higher energy costs could undermine growth and whether Central Banks around the world can look through the inevitably higher inflation rates.
- The ongoing conflict in Iran is significantly heightening risks to the current baseline forecasts for both economic growth and inflation. While immediate inflationary pressures are likely to delay any potential rate cuts by the Federal Reserve, the secondary impact on growth is becoming increasingly pronounced, raising the possibility of further weakness in the labour market and potentially necessitating additional policy action later in 2026. We expect the Federal Reserve to keep rates unchanged for the time being. Should economic growth deteriorate, rate cuts are likely to follow in 2027.
- We expect the ECB to hold interest rates at 2% throughout the forecast period. We believe the ECB is the least likely of the central banks to look through the energy price spike and will be alert for any signs of second-round effects. However, they are starting from a good position: inflation is at target and inflation expectations are consistent with their inflation target. The balance of risks has changed, and the risk of inflation is now higher.
- The Bank of England (BoE) adopted a somewhat surprisingly hawkish stance at its March meeting, with dovish officials voting to maintain rates at their current level and the minutes outlining scenarios in which the MPC may hike the bank rate. Inflation expectations in the UK and the apparent stalling in the disinflationary process caused by upward pressures, coupled with a potential supply shock, mean it is likely the BoE may be forced to hike.
- The Bank of Japan (BoJ) resumed its gradual rate hiking cycle in December. The real neutral rate remains uncertain, though the BoJ is currently reviewing its estimate, with the possibility of an upgrade from the prevailing range of -1% to +0.5%. Even within this range, further rate increases are supported, and given the continued weakness of the Yen, we have raised our outlook for the terminal rate to 1.5%. Prime Minister Takaichi secured a strong majority in the recent election and is expected to pursue a policy of responsible and proactive fiscal management, likely leading to a rise in government spending.
- Even prior to the advent of hostilities in the Middle East, we were anticipating Chinese GDP growth to decelerate to just 4.0% in 2026 and further to 3.8% in 2027. In the event of a widespread global slowdown, China's export sector, often considered a bulwark of the country's momentum, could come under further strain, putting ever greater pressure on the domestic economy to make up any shortfall. In other emerging markets, high energy prices could have a similar dampening effect on activity and push inflation upwards, undermining the ability of many central banks to reduce rates further. At the same time, in a reversal of the weakening US dollar trend, the recent strength of the USD could further reduce the scope for more central bank rate cuts.
- The conflict in the Middle East has materially increased risks to both growth and inflation. Higher energy prices are weighing on growth while simultaneously reinforcing inflationary pressures, pushing back expectations for Fed easing and raising the prospect of rate hikes in Europe. As a result, government bond yields have risen and credit spreads have widened, albeit from historically tight levels. Corporate fundamentals remain resilient, supported by stable balance sheets, while higher absolute yields have further increased the attractiveness of investment grade credit. The market continues to expect an elevated level of new issuance, with supply likely to remain an important theme through the first half of 2026, driven by M&A activity and rising AI-related capital expenditure.
